EXPERT REPORT OF JOHN R. ALFORD, Ph.D.

EXPERT REPORT OF JOHN R. ALFORD, Ph.D.

Scope of Inquiry

I have been retained by the Georgia Secretary of State and State Election Board as an expert to provide analysis related to *Grant v. Raffensperger*, *Alpha Phi Alpha v. Raffensperger*, and *Pendergrass v. Raffensperger*. All three cases are Voting Rights Act challenges related to the current U.S. Congressional, state Senate, and state House districts in Georgia. I have examined the reports provided by plaintiffs' experts Dr. Maxwell Palmer and Dr. Lisa Handley in this case. My rate of compensation in this matter is \$500 per hour.

Qualifications

I am a tenured full professor of political science at Rice University. At Rice, I have taught courses on redistricting, elections, political representation, voting behavior and statistical methods at both the undergraduate and graduate level. Over the last thirty years, I have worked with numerous local governments on districting plans and on Voting Rights Act issues. I have previously provided expert reports and/or testified as an expert witness in voting rights and statistical issues in a variety of court cases, working for the U.S. Attorney in Houston, the Texas Attorney General, a U.S. Congressman and various cities and school districts.

In the 2000 round of redistricting, I was retained as an expert to provide advice to the Texas Attorney General in his role as Chair of the Legislative Redistricting Board. I subsequently served as the expert for the State of Texas in the state and federal litigation involving the 2001 redistricting for U.S. Congress, the Texas Senate, the Texas House of Representatives, and the Texas State Board of Education. I have also worked as an expert on redistricting and voting rights cases in Louisiana, New Mexico, Mississippi, Wisconsin, Florida, Georgia, Michigan, New York, Arkansas, Pennsylvania and Alabama. The details of my academic background, including all publications in the last ten years, and work as an expert, including all cases in which I have testified by deposition or at trial in the last four years, are covered in the attached CV (Appendix 1).

Data and Sources

In preparing my report, I have reviewed the reports filed by the plaintiffs' experts in this case. I have relied on the analysis provided to date by Dr. Palmer and Dr. Handley in their expert reports in this case.

Dr. Palmer's Report

Dr. Palmer reports an EI election analysis that he uses to identify the candidate of choice of Black voters in each of 31 contests between 2012 and 2021. The race of each candidate is indicated in Dr. Palmer's Tables 2 through 6 with an asterisk by the name of each Black candidate. Beyond this labeling, there is no discussion of the impact, if any, that the race of the candidate might have on the behavior of Black or White voters in these contests. While he indicates the race of candidates, Dr. Palmer provides no party labels in these tables, and does not mention the party of candidates in his discussion of the results of his analysis. If we do consider the party affiliation of the candidates, the pattern over these election contests is stark. In all 31 contests, the candidate of choice of Black voters is the Democrat and the candidate of choice of White voters is the Republican.

In contrast, the race of the candidates does not appear to be influential. Black voter support for Black Democratic candidates is certainly high, as Dr. Palmer's Tables 2 through 6 in *Grant* and Tables 1 through 5 in *Pendergrass* clearly show, but those same figures also show Black voter support in the same high range for White Democratic candidates as it is for Black Democratic candidates. Similarly, White voter support for Black Democratic candidates is very low, but White voter support for White Democratic candidates is also very low.

For example, in the 2018 contest for Governor in Dr. Palmer's *Grant* Table 2 (his House Black Belt focus region) Stacey Abrams, the Black Democratic candidate, gets an estimated 98.6% of the Black vote, but in the same election in the adjacent Lt. Governor contest Sarah Riggs Amico, a White Democrat, gets an almost identical estimated 98.3% of the Black vote. Looking at White voters a similar pattern is clear. Abrams gets an estimated 9.7% of the White vote, but in the same election in the adjacent Lt. Governor contest Amico, the White Democrat, gets an almost identical estimated 9.8% of the White vote.

Similarly, in the 2021 U.S. Senate runoffs in Dr. Palmer's *Grant* Table 2 (his House Black Belt focus region) Raphael Warnock, the Black Democratic candidate gets an estimated 98.1% of the Black vote, but in the same election in the other Senate contest Jon Ossoff, a White Democrat gets an almost identical estimated 98.5% of the Black vote. Looking at White voters a similar pattern is clear. Warnock, the Black Democratic candidate, gets an estimated 12.7% of the White vote, but in the same election in the other Senate contest, Ossoff, the White Democrat, gets an almost identical estimated 12.0% of the White vote.

This same pattern of nearly identical results in these two pairs of recent contests is evident across all five of the focus regions as indicated in Dr. Palmer's *Grant* Tables 2 through 6 and *Pendergrass* Tables 1 through 5. Clearly Black voters are not voting differently when the Democratic candidate happens to be Black. Similarly, White voters are not voting differently when the Democratic candidate happens to be Black. In fact, in the Senate contest election pairs for the two recent 2021 runoff contests the White vote for Warnock, the Black Democratic candidate, is actually *higher* than the White vote for Ossoff, the White Democratic candidate, in all five focus regions.

In short, all that Dr. Palmer's analysis demonstrates is that Black voters provide uniformly high levels of support for Democratic candidates and White voters provide uniformly high levels of support for Republican candidates. There is no indication in these EI results that the high levels of Black voter support for Democratic candidates is connected in any meaningful way to the race of the Democratic or Republican candidates. Similarly, there is no indication in these results that the high levels of White voter support for the Republican candidates is connected in any meaningful way to the race of the Democratic or Republican candidates.

Moving beyond his EI analysis, Dr. Palmer also provides reconstituted election results to demonstrate the success rate of Black preferred candidates in various district within his focus areas. Given that as mentioned above the Black preferred candidate is always the Democratic candidate, and given the dominance of political party in the EI results as discussed above, it is no surprise that these tables show that Democratic candidates, regardless of race, do predictably well in majority Black districts. Again this is a function of the relative levels of Democratic and Republican support among Black and White voters, not a function of elevated Black support for Black candidates or of elevated White opposition to Black candidates.

Dr. Handley's Report

Dr. Handley in *Alpha Phi Alpha* focuses first on general elections, and reports results similar to those reported by Dr. Palmer. Black voters support Democratic candidates and White voters support Republican candidates. She indicates that she has chosen to focus on racially contested elections, so this limits the ability to see whether this partisan pattern varies at all with the race of the candidates, but in the two contests without a Black Democrat, the Ossoff 2020 Senate contest and 2021 runoff, the results for both Black and White voters are very similar to the results for the racially contested elections, as was the case in Dr. Palmer's larger set of general elections.

Unlike Dr. Palmer, Dr. Handley also analyzes eight racially contested statewide Democratic primaries. The results in these primaries are very different from the general election patterns. In the general elections Black support for the Democratic candidate is very high and very stable in the upper 90% range. In the Democratic primaries the support of Black voters for Black candidates varies widely, and does not reach into the 90% range. Similarly, White voter support for Democratic candidates is typically below 10% in the general elections, but in the primaries White support for Black candidates varies widely and is often fairly evenly divided. In many of the contests within her six focus regions, the votes of Blacks, Whites, or both are divided too evenly to characterize the voting as cohesive.

This is further complicated by the fact that the older iterative EI technique that Dr. Handley is using makes it difficult to interpret close results as they don't always sum to 100 as the actual results must. More recent RxC techniques avoid this and other problems with the earlier iterative approach. Further, unlike Dr. Palmer, Dr. Handley does not report any confidence intervals for any of her estimates. Depending on the width of the confidence intervals there are multiple instances where the vote splits she reports are so close to 50/50 that we may not be able to say with any assurance which candidate a group of voters preferred. Even if the confidence intervals were reported, it is generally agreed that the intervals produced in both ER estimation and iterative EI estimation are not statistically valid. I have not had the time to complete a more appropriate RxC EI analysis of the primary elections, and so my comments here are preliminary as I am relying on Dr. Handley's EI results despite my uncertainty about them.

Looking at the individual contests the most recent is the 2020 Democratic primary for the U.S. Senate in which Ossoff typically has at least a plurality of both Black and White voters, and in which less than a third of Black voters are voting for Black candidates. This contest is not racially polarized in any of Dr. Handley's six focus regions, and Ossoff wins the primary statewide. In the 2018 election there are six racially contested primaries on the same ballot, and the variation in racial voting patterns across them is quite high. In the Governor's contest the Black candidate, Abrams, is the first choice of both Black and White voters in two of the focus regions, and the White vote split is too close to 50/50 in the remaining four to be characterized as bloc voting, and in fact Abrams wins the primary statewide.

The 2018 Lt. Governor contest looks quite different from the Governor contest and is the contest that comes closest to something like polarized voting. The remaining four 2018 contests show very mixed patterns, and the Black candidate won statewide in two them. The one 2016 primary included is clearly not polarized. Statewide Black candidate won three of the six 2018 racial contested Democratic primaries.

Summary Conclusions

The partisan general election analysis report by Dr. Palmer and Dr. Handley show that Black voters cohesively support Democratic candidates, regardless of whether those candidates are Black or White. Similarly, White voters cohesively vote for Republican candidates, and in opposition to Democratic candidates, regardless of whether those Democratic candidates are Black or White. Thus it is cohesive Black voter support for *Democratic* candidates, and white voter support for *Republican* candidates that the general election analysis reveals, not cohesive Black voter support for *Black* candidates and white voter support for *White* candidates.

Nonetheless, the voting pattern is clearly one of partisan polarized voting, with 90% cohesive Black vote for the Democrat and 90% cohesive White vote for the Republican candidate. The more limited analysis of Democratic primaries reported by Dr. Handley has methodological issues, and even taken at face value shows a very different picture of voting behavior from the general elections. Nothing even approaching the levels of Black and White cohesion seen in the general elections appears anywhere in the primary contests, and the overall patterns are mixed and variable even within the same set of voters on the same day as we see in the multiple contests in the 2018 Democratic primary.
